North American Spine & Pain Clinic

The above procedures and any repair and/or parts to maintain proper fit and function are appropriate for this patient and are deemed medically necessity.

Medical Necessity:

{11/20/2023}-Orthotic Evaluation-The patient is presented with chronic neck pain that goes into bilateral shoulder blades and radiates into the left arm. Occasionally pain goes into the right arm. Numbness and tenderness, weakness in the left hand and dropping of objects. Also complains of chronic bilateral low back pain radiates into the left leg. Right hip pain, which is new. She describes hip pain as stabbing and constant, pins and needles sensation. Weakness of both legs. Patient rates the pain 8/10 on NRS. Patient complaints of chronic ongoing neck pain, shoulder pain, and right hip and knee pain. Patient reports the nidus of the neck pain is motor vehicle accident on 10/06/2022. She is not able to sleep. She is not able to stand, walk, sit and transition between these movements. Based on her condition, bilateral knee braces and cervical collar have been recommended for him as part of his current treatment plan. Hence recommended, 1. Bilateral Knee Brace, Knee Orthosis will support an unstable knee joint by unloading the pressure from it, assisting the patient while ambulating, improving their range of motion and relieving pain. 2. Cervical collar Cervical Collar will improve the support of the cervical region, instability and reduce the strain on cervical spine by limiting the mobility of the head and neck complex. Hence allowing healing of the injured site and gaining muscle strength while patient is on rest.
